

Create With Templates

On "**Start New Project**" section, you can see the **premade templates** besides the "Create New Creation" button.

Each template offers different purposes for a simple project, a presentation project, and even a quiz project.

Choose one from the templates and don't forget to name the template.

Once you're in the Editor, you can edit the project according to your liking. However, you can also use the project straight without having to edit anything—if it already suits your preference.
